THIS IS UNEVALUATED INFORMATION

On 12 October 1953, Horst Rehtanz, Chief Metallurgical Department at the State Planning Commission (SPK), in a meeting of the SPK stated that some figures in the steel production plan were corrected. He said that these figures included the production quota for raw steel which had twice erroneously included the output of one VVB enterprise and was reduced from 2,430,500 tons to 2,396,800 tons and also mentioned that the production figure for rolled steel, fixed in the draft for the 1954 economic plan at 1,682,000 tons, was based on 1.31 as coefficient for rolled steel to raw steel.[1] He added that the production and import of pig iron was planned at 625,000 tons and that 50,000 tons would have to be imported on an additional basis as the requirements amounted to 675,000 tons.

1. [redacted] Comment. The coefficient 1.31 was apparently not applied, since the figure for raw steel would then be 2,203,420 tons, rather than 2,396,800 tons.
